

# CSL CONNECTED

Professional Monitoring, Plus Smartphone Apps

CSL Connected offers our critical connectivity with your chosen alarm panel and the added option of an End-user App.

In partnership with the industry's leading Panel Manufacturers, CSL Connected provides connectivity directly to the ARC via our Gemini Global Platform, offering installers professionally monitored single or dual-path signalling.

The App allows users to set and unset their alarm system, view and control cameras, receive real-time alerts and much more from the palm of their hand.

The Installer simply places a single order with the ARC and will receive the manufacturer's communication device (Radio/LAN/Wi-Fi or a combination) with CSL Connectivity enabled. Once installed, the system will offer faster UDL sessions and on-the-go access for End-users.

- Radio, LAN & Wi-Fi variants all available,
- with a combination utilised for dual-path (depending on the manufacturer)
- ARC Connection Only variant to add
- Monitoring to installations where hardware is built into the panel
  - Single-path conforms to SP2
  - Dual-path conforms to DP2
  - Option of End-user App
  - Fast Format, Contact ID and extended SIA
  - Faster UDL sessions
  - WorldSIM selects the strongest network to eliminate downtime

## CHOOSE CSL CONNECTED FOR

### Easy Installation

Order your relevant module from CSL that can be plugged straight into a panel and programmed via the keypad

### End-User Apps

Smartphone App for your chosen panel offering your customers control of their system
