

M2M

Whether it's Critical Connectivity solutions where there is a threat to life or property, multi-path high availability communications for transactional data or even the transmission of telemetry data from remote devices, we can offer a fully managed cost effective secure Machine to Machine (M2M)/Internet of Things (IoT) solution tailored to fit your needs.

We provide global coverage with multiple Network Partners and are already trusted to provide the most resilient management platforms and infrastructure for nearly half a million M2M connected devices across a range of vertical industries throughout Europe.

Our heritage gives us deep insight into the challenges of reliable two-way communications in the ever expanding connected world. We have an experienced team who are here to help you with your requirements and solve your problems. We provide innovative, independent and network agnostic advice on the best solution for your product or application, whether it's SIM only, satellite or DSL, low or high usage or even a hybrid mix.

We have longstanding relationships with Mobile Network Operators and device manufacturers, which together with our own test tools and patented technology allows us to source and combine the best component parts for your M2M/IoT connectivity requirements. This is all supported by our 24/7 managed support services to ensure maximum availability, reliability and customer service.
