

MINIAIR

The smallest radio communicator on the market

DualCom MiniAir utilises all mobile networks via our WorldSIM to signal an alarm from a protected premises to a Smartphone, alerting a keyholder.

MiniAir is the smallest radio communicator on the market. It is designed for residential premises as an affordable upgrade to a bells-only system, as it fits into any existing or legacy control panel.

MiniAir embraces the Smartphone revolution and offers an easy-to-use App for end-users to arm/disarm, view event logs and receive push notifications in the event of an alarm activation.

It also has the option to enable ARC monitoring permanently or temporarily for an end-user to protect their property.

Like all CSL products, MiniAir is supported by the Gemini Global Platform, which has been designed with full resilience and diversity at every point. Gemini checks the entire signalling route, providing the highest levels of reliability.

- Easy-to-use end-user App featuring
- push notifications direct to your customers
 - Remote arm/disarm and the option to view event logs
 - Can be used for self-notification only or full ARC connectivity
 - Works via Dial Capture or Bell Trigger
 - Bolt on to legacy control panels with CID PSTN modem or I/Os
 - WorldSIM as standard - improving device reliability and reducing false alarms
